INVESTOR OVERVIEW · 2026

Cold-chain infrastructure for Africa's fresh food.

Storage, quality assurance, and delivery that keep fresh produce moving — reducing post-harvest loss across the supply chain.

Accra, Ghana · info@keepxtra.com · keepxtra.com

MARKET CONTEXT

Africa's food system is growing faster than its infrastructure.

Demand for fresh food is rising with urbanisation and population growth — while cold-chain and logistics capacity lag behind.

Rising urban demand

Fast urbanisation concentrates demand for reliable, quality fresh food.

Cold-chain gap

Storage and logistics capacity trail production, so produce spoils before sale.

Fragmented supply chain

Informal intermediaries add cost and uncertainty to every transaction.

~2x

Africa's population is projected to nearly double by 2050, driving food demand.

Source: UN World Population Prospects

THE PROBLEM

Fresh produce is lost before it reaches a buyer.

Weak cold-chain and fragmented logistics mean a large share of harvest spoils on the way to market.

27.3%

of food is lost in Western Africa before it reaches retail.

Source: FAO, SDG Indicator 12.3.1 (2024)

Fragmented logistics

Informal, uncoordinated transport raises cost and slows delivery.

Farmer income at risk

Spoilage and inefficiency erode the income farmers actually keep.

Unreliable supply

Buyers struggle to plan around inconsistent, unpredictable supply.

OUR SOLUTION

The cold-chain infrastructure the market is missing.

We operate the physical infrastructure — and the software that ties it together.

Cold storage

Temperature-controlled capacity that extends shelf life and cuts spoilage.

Quality assurance

Grading and inspection so buyers receive consistent, safe produce.

Distribution

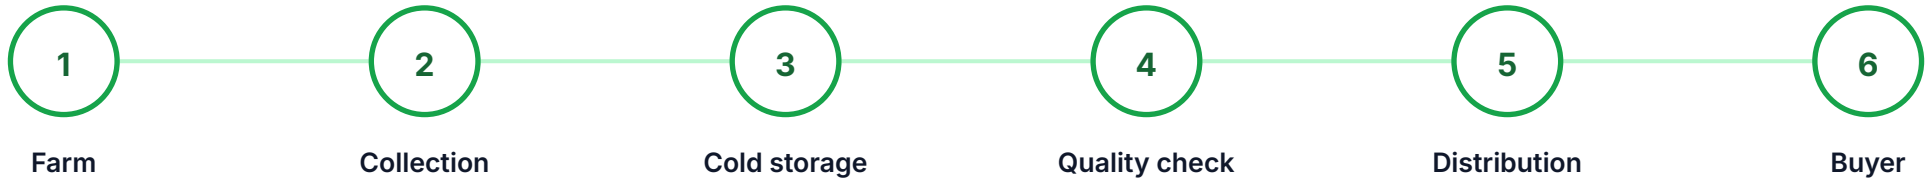
Route-optimised logistics built for perishable goods.

Technology

One connected system for inventory, quality, and delivery tracking.

HOW IT WORKS

One connected chain, from farm to buyer.



Produce moves from partner farms into cold storage within hours, is quality-checked and tracked in real time, then routed to buyers — cutting out the informal middle layers that cause the most loss.

BUSINESS MODEL

Five recurring revenue streams.

Diversified, usage-based, and contracted revenue across the chain.

01	**Storage fees**	Recurring fees for cold-storage capacity.
02	**Delivery fees**	Per-delivery and route-based logistics fees.
03	**Subscription plans**	Guaranteed capacity on monthly plans.
04	**Enterprise partnerships**	Custom supply agreements with institutions.
05	**Marketplace revenue**	A share of transactions on the marketplace.

WHO WE SERVE

Built for every link in the fresh-produce chain.

We grow city by city, then across West Africa — deepening each market before expanding.

Farmers & traders

Sell more with less loss.

Restaurants & hotels

Reliable, quality produce.

Retailers

Consistent supply, fewer stockouts.

Schools & hospitals

Safe, dependable food supply.

Processors & exporters

Volume, quality, traceability.

ROADMAP

A deliberate path from launch to regional scale.

2026

Launch

First cold-storage facility and delivery routes.

2027

Regional

New storage hubs across neighbouring cities.

2028

National

Connected storage and logistics nationwide.

2029

West Africa

Entry into new West African markets.

IMPACT

Less waste. More income. Lower emissions.

Food security

More of every harvest reaches the people who need it.

Farmer income

Fair pricing and faster payment cycles.

Environment

Less spoilage means fewer embedded emissions.

TEAM

A focused founding team.

Operators building the infrastructure from the ground up.

Business Development

THE ASK

Seed round to fund our first cold-storage hub and fleet.

Capital deployed toward capacity, logistics, and the platform.

SEED ROUND

$100K

To fund cold-storage capacity, fleet expansion, and the technology platform for our next two roadmap phases.

Use of funds

Cold storage	40%
Fleet & logistics	25%
Technology	15%
Working capital	12%
Team	8%
